Values

Quality

Responsibility, excellence, innovation and passion characterize the approach of Raccorderie TAA to the market. Our quality system drives each single step from design to production and after sales service, in compliance with the IATF 16949.

Customer satisfaction is our target, an approach in which every process is analysed and optimised along the entire production chain, from design to after-sales services.

Know how

Raccorderie TAA's strong know-how, acquired over the years through the development of numerous new projects, enables it to meet the needs and expectations of every industry.

Our design and production teams provide customers with technical support to identify the best solution for each project and maximize production efficiency.

Innovation

The Raccorderie TAA machine shop is equipped with CNC transfers, multi-spindle machines, sliding headstock lathes, CNC lathes double-spindles and a very flexible assembly and testing department.

Parts are produced by machining forgings, bars and welded joints from carbon steel, stainless steel, brass and aluminum.

Service & flexibility

Raccorderie TAA provides an exceptional level of service, with a customer service and logistics team that constantly monitors compliance with agreed-upon deliveries.

Potential deviations are addressed promptly, making Raccorderie TAA a reliable partner for even the most demanding OEMs.

Products

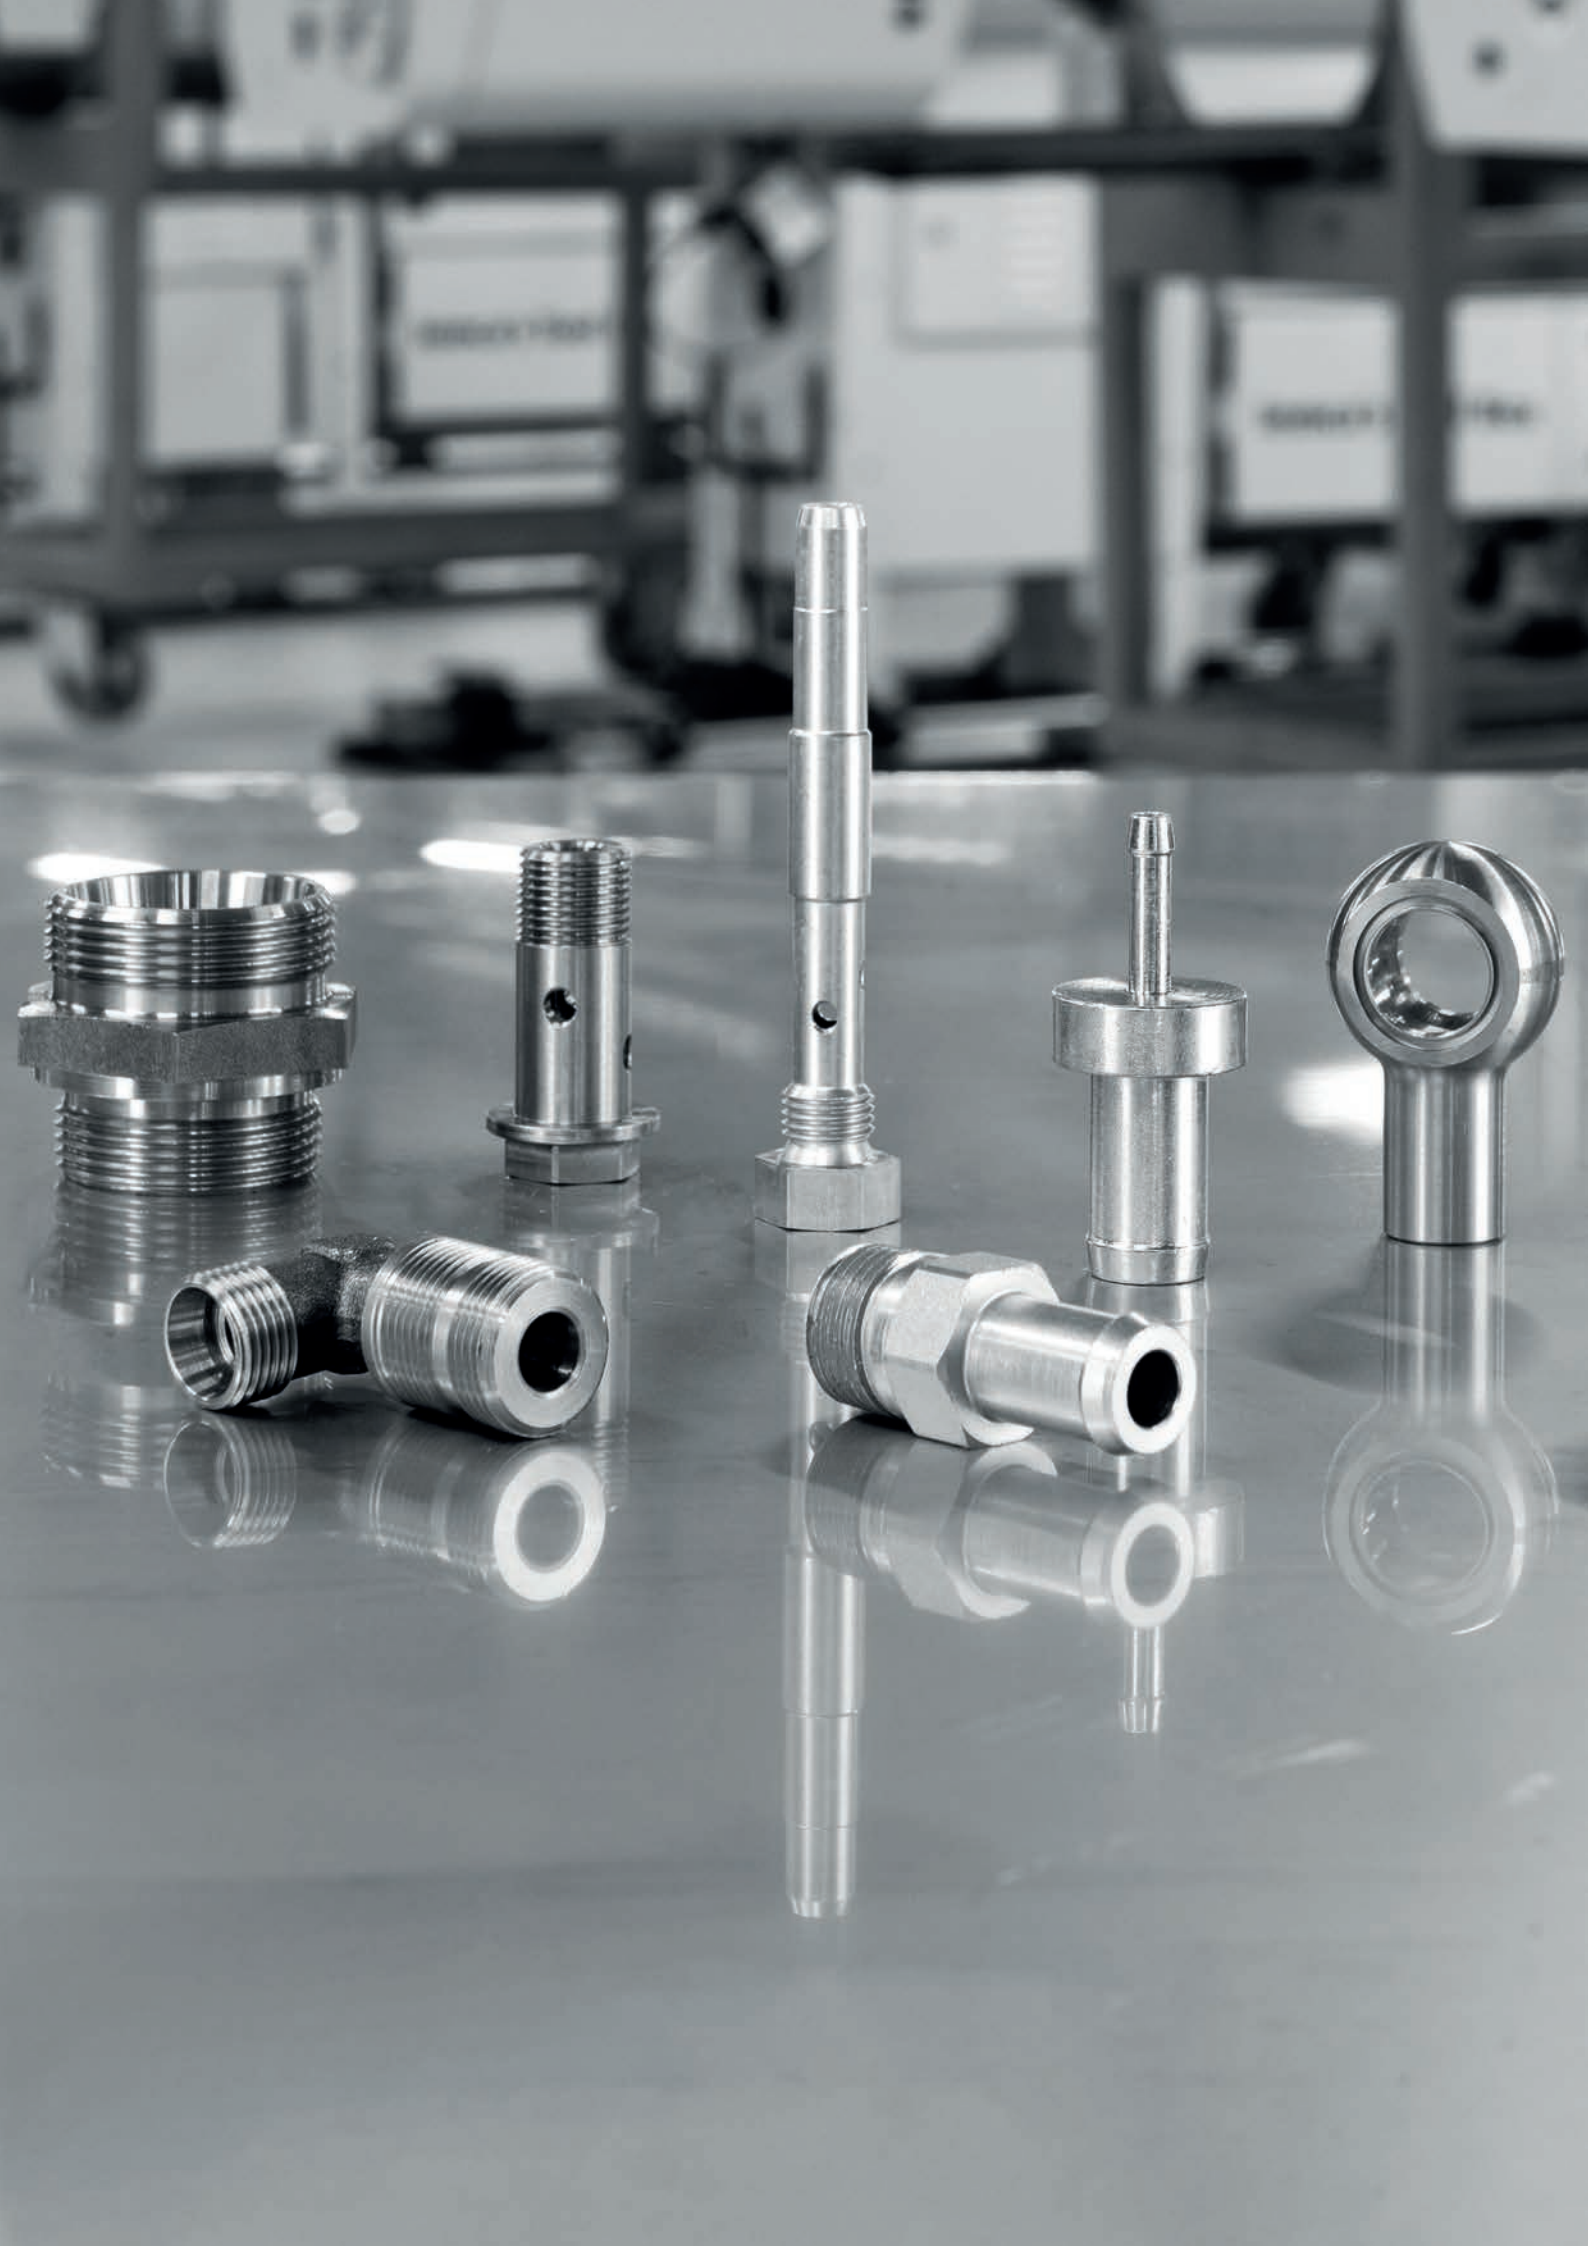

- **Fittings and fluid conveyors**
Standard or special, based on customer design
- **Fuel Rail**
For gasoline and CNG applications
- **Valves**
Developed in co-design with the OEMs

Fittings and fluid conveyors

Raccorderie TAA manufactures fittings both to customer drawings and according to DIN, ISO, JIC standards.

Raccorderie TAA's wide range includes connectors, quick couplings, nipples, hose holders, fittings swivels, both to customer drawings and according to ISO, SAE, DIN, BSP, JIC standards.

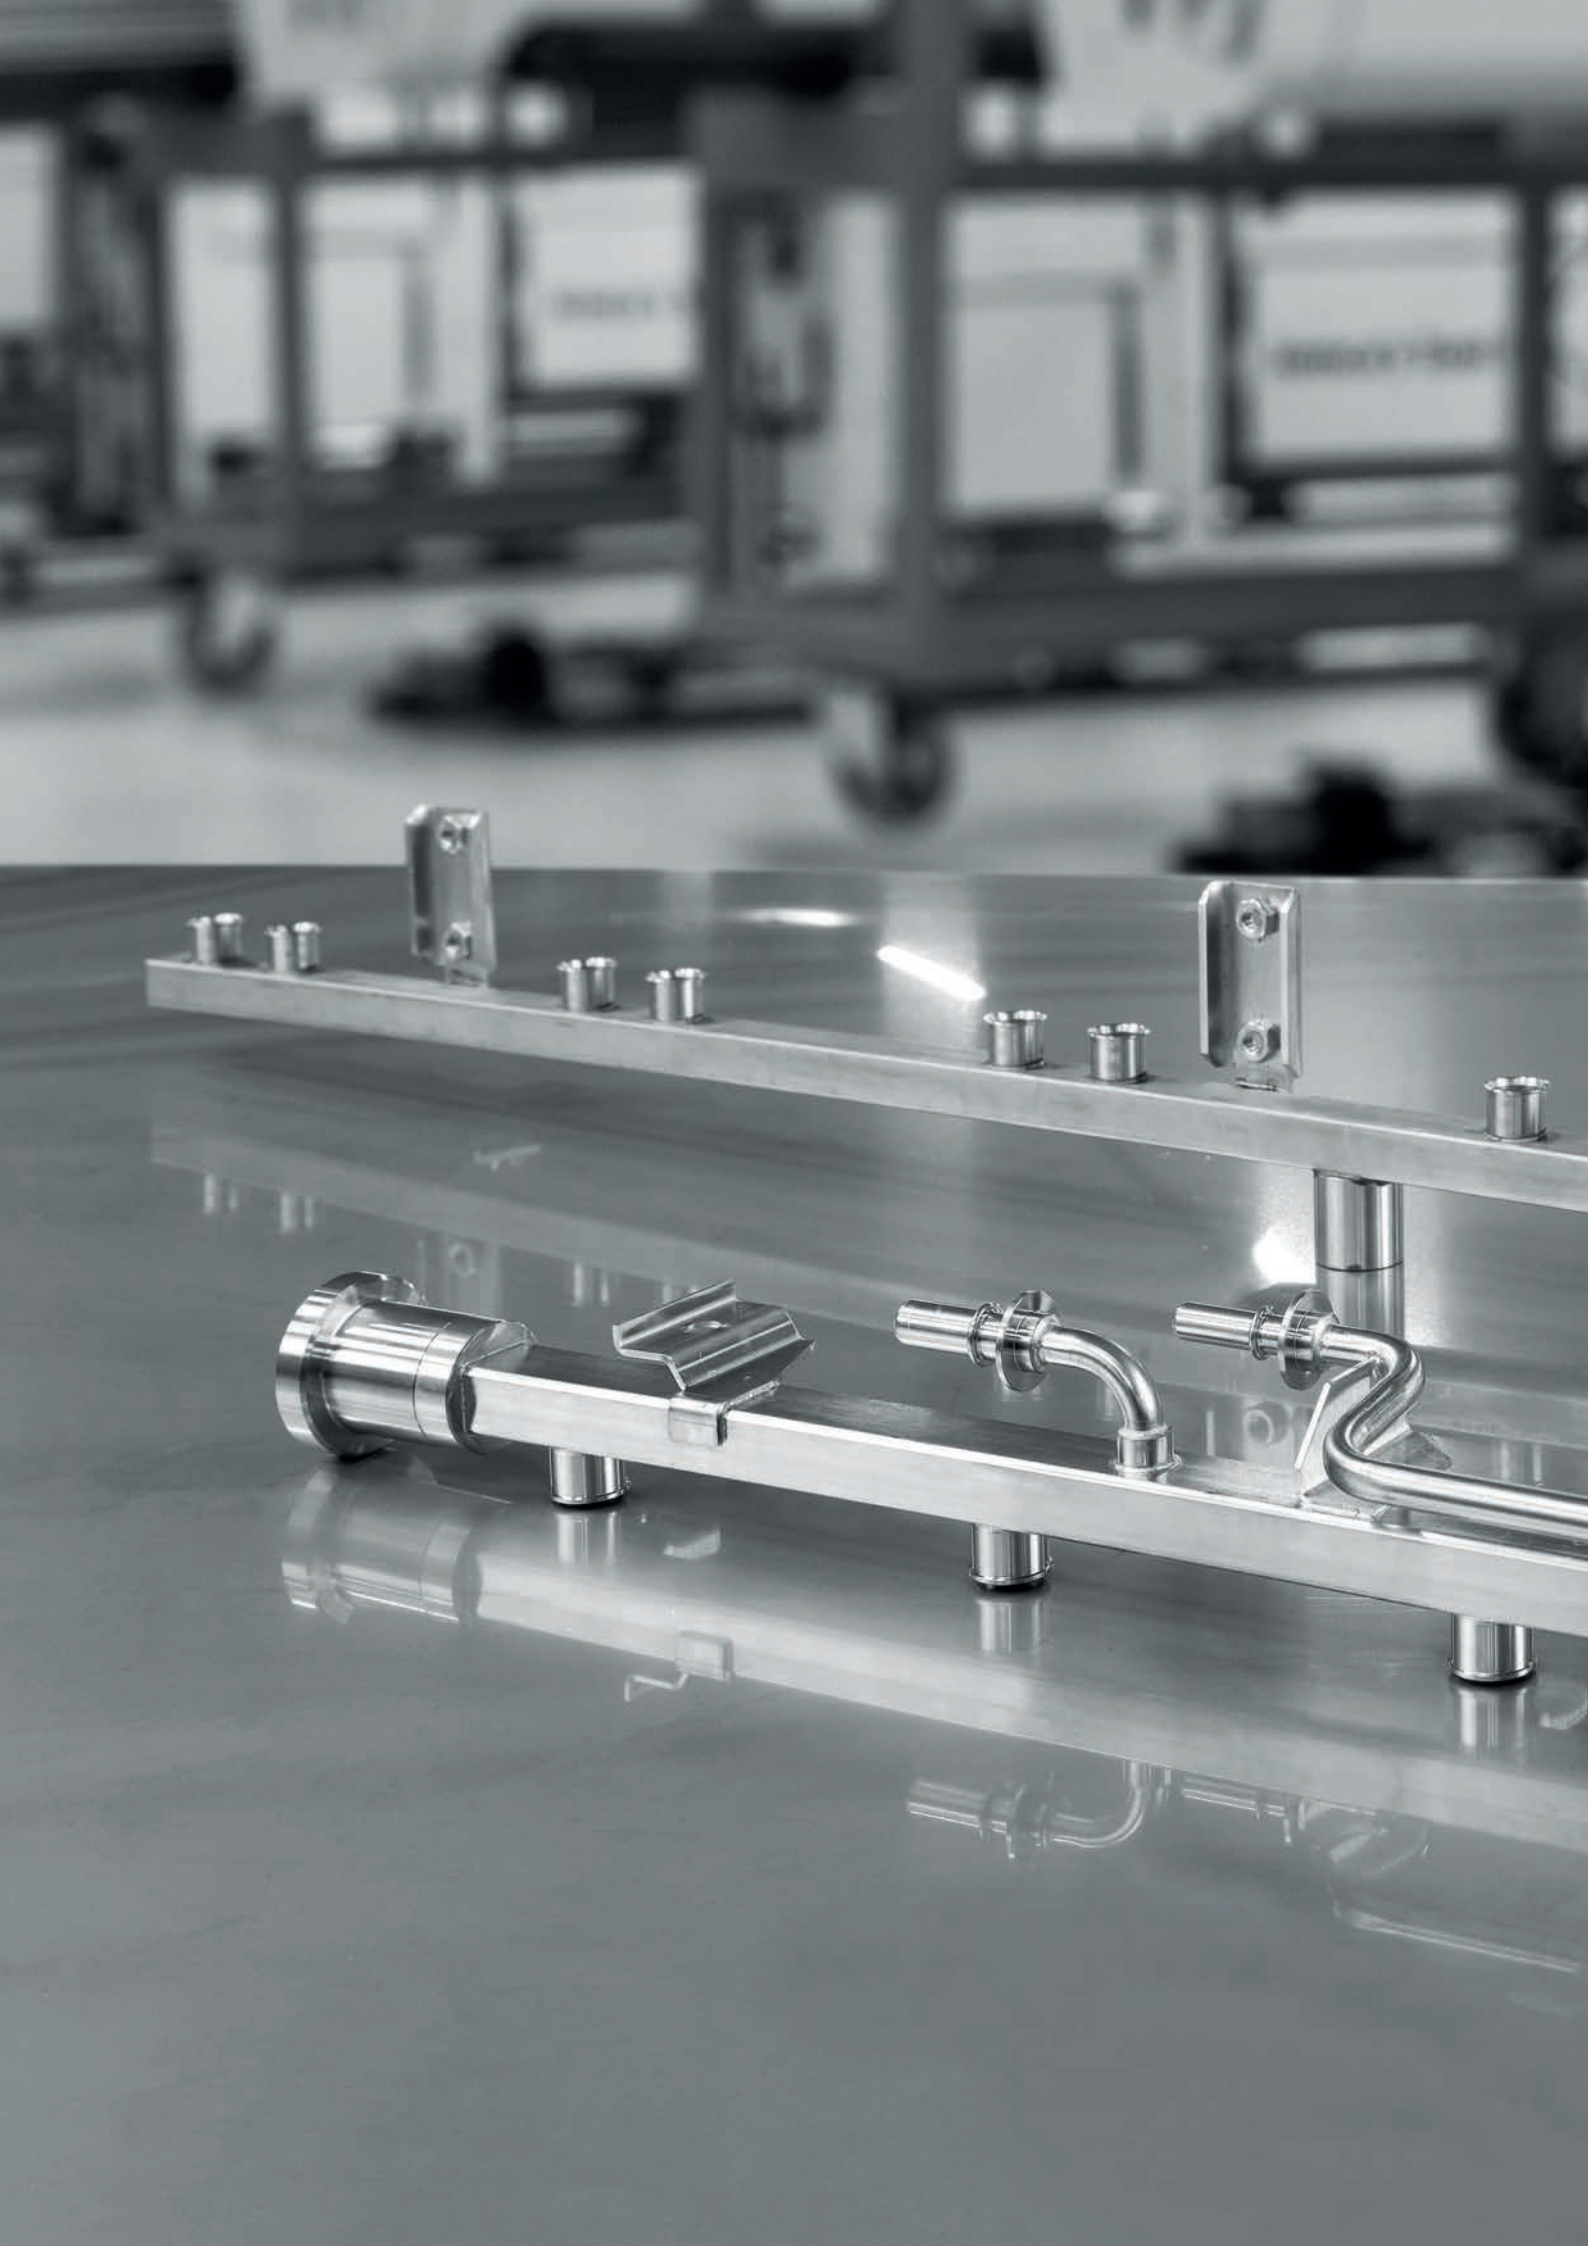

Fuel Rail

Rails are used to carry the right amount of fuel to the injection system.

Raccorderie TAA has a well consolidated experience supplying CNG and gasoline fuel rails to the main commercial vehicle OEMs.

The production of rails is 100% tested to verify the leakage absence of the assembled components.

Valves

Mechanical valves made of carbon steel, stainless steel and brass, used to keep fluids under pressure.

Our engineering department uses several established solutions to support customers in designing and selecting the best solutions for their applications.

Raccorderie TAA, company of the Atos Group

Atos Group Vision for Raccorderie TAA

The Atos target is to make Raccorderie TAA a reliable partner for its customer, by combining:

- the management methods and the world-class quality of a multinational group
- the flexibility and fast reaction time of a family company

Atos Group

We are specialists, 100% dedicated to electrohydraulics, in a constant search of innovative solutions for any application, from the industrial ones with our high-performance axis controls, to the explosion-proof line for hazardous locations and the stainless steel for corrosive environments and fluids.

Mission

We believe in the value of technology and we are constantly searching for innovation and quality thanks to our people's value.
